ABOUT

I'm a third-year architecture student at Texas A&M, and residential work is what gravitates me in Architecture. There's something about designing for how people really live day to day, not just how a building looks from the street, that feels like the most honest part of architecture to me. I care a lot about making housing that's attainable without feeling like a compromise, and about small design decisions, light, layout, materials, that end up shaping someone's everyday life more than people realize.

Outside studio, I run a small design business called Aggie Web Creators, where my team and I take on web projects. Using what I have learned through studios, I've learned to turn my design idea into beautiful final websites for small businesses. I'm looking for a residential firm where I can bring that same instinct, structural logic paired with strong visual communication to real projects.

PROFESSIONAL EXPERIENCE

Founder, Front-End Developer - Aggie Web Creators, Virtual

Dec. 2025 - Present

- Launches and operates a digital design studio serving clients across web development and branding
- Manages project timelines and client relationships
- Produces marketing and visual identity assets for clients

Lead Tutor & Program Coordinator - TAMU Reads & Counts, College Station, TX

Aug. 2024 - Present

- Oversees schedules and logistics for a campus tutoring program
- Mentoring incoming tutors and manages time-entry systems

Technician & Customer Service - Sour Apple Repair, College Station, TX

June. 2026 - Present

- Diagnoses and repairs for hardware/software issues across phones and computers in a fast-paced environment

Marketing Assistant - Miller Hats, Houston, TX

Aug. 2014 - 2016

- Curated brand identity and digital content creation and developed a high proficiency using Adobe Creative Suite

SKILLS

Design & Drafting Software: Rhino, Sketchup, AutoCAD, Revit

Design Focus: Bioclimatic Design, Modular Housing Systems, CLT/Timber-Frame Assemblies, Sustainable Materials

Visual Communication: Adobe Photoshop, Illustrator, InDesign, free-hand sketching, oil painting

Project & Client Management: Client relationship management, project timeline coordination, program scheduling and logistics

ACHIEVEMENTS

HSF Scholar Award, Hispanic Scholarship Fund

Jun. 2025

2025 NSCS Recipient, National Society of Collegiate Scholars

Aug. 2025

TAMU Academic Scholarship, Endowed Opportunity Award

Aug. 2024

NAWIC Design Drafting Competition, 2nd Place

Feb. 2024

EDUCATION

Bachelor of Science, Architecture

Expected May 2028

Texas A&M University, College Station, TX

CONTENTS

ONE SYSTEM, THREE SCALES

A MODULAR HOUSING MODULE FOLLOWED FROM A STRUCTURAL STUDY TO FULL COMMUNITY

PRISMATIC INFILL

A SUBURBAN PROTOTYPE

Austin, Tx | Spring 2026

A single modular house testing a repeatable timber-frame system, explored further in Timber Framing, and scaled into the multi-unit community in Living Infrastructure.

Prismatic Infill rethinks attainable housing as a compact, repeatable system of domed volumes that can be inserted into a typical Austin residential lot. The dome geometry distributes structural load evenly, reducing material demand while supporting large, continuous interior volumes and encouraging natural air circulation in Austin's hot climate. Trapezoidal cuts carve circulation, stairs, and openings into the domes, creating compression and expansion that guide movement while enhancing daylight and cross-ventilation throughout the structure.

CIRCULATION

SECTION (EAST)

THESE GEOMETRIC INTERVENTIONS
GUIDING MOVEMENT WHILE ENHANCING

CTIONS CREATE MOMENTS OF COMPRESSION AND EXPANSION,
ANCING DAYLIGHTING AND CROSS-VENTILATION THROUGHOUT
THE INTERIOR SPACES.

SECTION (NORTH)

PASSIVE SOLAR DESIGN

Optimized orientation and the roof domes help maximize winter solar gain while reducing the summer heat

HIGH-PERFORMANCE ENVELOPE

Continuous insulation throughout the interior and includes airtight detailing

LOW-CARBON MATERIALS

Renewable timber and the use of low VOC helps create and interior space with low embodied carbons

NATURAL LIGHTING & MATERIALITY

TRAPEZOIDAL CUTS AND SECTIONAL VOIDS CAN
 INTO THE DOMES TO DEFINE CIRCULATION, STAIRS
 AND EXTERIOR OPENINGS

LIVING INFRASTRUCTURE

MULTI-UNIT URBAN RESIDENTIAL

Austin, Tx | Spring 2026

The Prismatic Infill module scaled from a single house into a connected, multi-unit urban residential community on the same Austin site.

This project tests whether one repeatable housing module can scale from an individual home into a full community. Interconnected volumes establish a hierarchy of private units, shared circulation, and communal space. The idea was to preserve each unit's access to natural daylight, outdoor space, and spatial identity even as density increases.

PROGRAM CATALOG

LIVING INFRASTRUCTURE-BUILDING B, 1/4 SCALE MODEL

This model shows Building B's mix of private, public, and semi-private spaces. The left hinge reveals a private unit for multi-generational living, while the right hinge opens onto a semi-private space with a ground-floor arcade and upstairs media room. Each unit is organized to help balance community space with private living.

LIVING INFRASTRUCTURE-SITE PLAN MODEL, 1/16 SCALE

This model represents the existing urban site in Austin, with color marking each space's function. Dark blue at the center denotes shared plazas and walkable paths; white marks private housing, pink marks semi-public space, and light blue marks fully public space across the four massings.

SECTION-BUILDING A & B

TIMBER FRAMING

BONE + STRUCTURE MODEL FOCUS

Model Before/After | Spring 2026

The structural model study behind the timber-frame system used in Prismatic Infill and Living Infrastructure — shown here in its two iterations, before and after refinement.

First iteration: a vertical timber-beam frame with trapezoidal dome voids and slanted skylights. This system defined the massing but left the domes structurally disconnected from the frame below, which was later the problem the second iteration set out to solve.

SECOND ITERATION: THE VERTICAL BEAM SYSTEM WAS REPLACED WITH A V-SHAPED TRUSS FRAME, TYING THE DOME GEOMETRY DIRECTLY INTO THE BUILDING'S STRUCTURAL LOGIC RATHER THAN TREATING IT AS AN APPLIED FORM.

TRINITY BATHHOUSE

WELLNESS + COMMUNITY BATHHOUSE

Dallas, Tx | Fall 2025

Trinity Bathhouse organizes a communal wellness complex along a central axis of grouped massing, with the baths themselves as the unifying element for each cluster. A stacked, terraced system of central staircases keeps the front baths aligned along that axis, while the rear baths break from it asymmetrically to help open the plan toward the surrounding levee and framing views beyond the site.
